Record Scope & Status Key

How this routine check record should be used

Record context

Pest Intel is a digital pest-management and inspection-record system. It helps a food business record routine monitoring, findings, actions taken, follow-up needs, and printable evidence in a consistent format that supports inspection readiness.

This record supports, but does not replace, the food business's HACCP-based food safety management system, Safer Food Better Business records where used, or pest-control contractor service records.

- Green = all clear / no immediate concern identified.
- Amber = review soon / manageable findings that are already being tracked and followed up.
- Red = action needed now / higher-risk findings requiring prompt corrective action.
- 0 attention point(s) — no immediate concern identified.
- Where attention points are recorded, Pest Intel can bring the next monitoring check forward to 18 Sept 2026.
